**Optimal feedback control for undamped wave equations by solving
a HJB equation**

Zeit: 15:15 Uhr

Raum: C 427

Interessenten sind herzlich willkommen!

Abstract: An optimal finite-time horizon feedback control problem for (semi-linear) wave equations is presented.

The feedback law can be derived from the dynamic programming principle and requires to solve the evolutionary Hamilton-Jacobi-Bellman (HJB) equation. The effect of noise is considered and numerical examples are presented.
