## Optimierung Exercise Guidelines

- On each sheet there will be four exercises. Everyone shall present successfully at least one time an exercise on the blackboard.
- Only exercises with a “✓”-symbol will be evaluated.
- Every student has to write down the solutions of the written exercises individually.
- On three sheets there will be an additional programming exercise that is meant to be done in groups of two by using MATLAB. The source code has to be sent to the tutor of the respective group. Only running programs will be taken into account.
- Every programming exercise has to be presented to the tutor.
- All comments in the programming as well as in the written exercises should be written in English.
- As a minimum limit 40% of the points of the written exercises have to be reached.
- As a minimum limit 50% of the points of the programming exercises have to be reached.
- At the end of the semester there will be a written exam.
- The points reached both in the programming and in the written exercises will be taken into account for the final mark.
