## Contents

---

<b>1 Special classes of topological vector spaces</b>	<b>1</b>
1.1 Metrizable topological vector spaces . . . . .	1
1.2 Fréchet spaces . . . . .	9
1.3 Inductive topologies and LF-spaces . . . . .	14
1.4 Projective topologies and examples of projective limits . . . . .	23
1.5 Open mapping theorem . . . . .	25
<b>2 Bounded subsets of topological vector spaces</b>	<b>33</b>
2.1 Preliminaries on compactness . . . . .	33
2.2 Bounded subsets: definition and general properties . . . . .	36
2.3 Bounded subsets of special classes of t.v.s. . . . .	39
<b>3 Topologies on the dual space of a t.v.s.</b>	<b>45</b>
3.1 The polar of a subset of a t.v.s. . . . .	45
3.2 Polar topologies on the topological dual of a t.v.s. . . . .	46
3.3 The polar of a neighbourhood in a locally convex t.v.s. . . . .	53

<b>4 Tensor products of t.v.s.</b>	<b>57</b>
4.1 Tensor product of vector spaces . . . . .	57
4.2 Topologies on the tensor product of locally convex t.v.s. . . . .	62
4.2.1 $\pi$ -topology . . . . .	62
4.2.2 $\varepsilon$ -topology . . . . .	68
<b>Bibliography</b>	<b>73</b>
